2. Run a terminal program on the PC connected to the Setup port. The serial port settings should be: 9600 baud, 8 data bits, 1 stop bit, no parity, and no flow control.
3. Turn on the switch.
4. In the terminal program, press any key when the *Hit any key to stop autoboot* prompt appears.
5. A menu displays on the terminal program. Press **1**, then **Enter** to select Boot Alternate.
6. The switch will reboot automatically to the previous firmware version.
